

# Product Description

## Halogen Flood Lights for Reptiles

The Todaybulb's halogen flood lights for reptiles are powerful, crisp, bright and Infra-red-A rich. The special aluminium reflector concentrates light and heat without significantly raising the ambient air temperature compared to traditional incandescent reptile spot lamps of the same wattage. This makes it easier to establish proper heat gradients in the terrarium and allows for greater distances between the animal and the lamp. The halogen flood heat lamp would be used with a suitable dimming thermostat.

### Advantage

#### - Precise Heat and Light Control

The halogen basking lamp offers focused light with a directed heat beam, making it perfect for creating accurate basking zones.

#### - Extended Lifespan & Durability

With its superior design and use of halogen gas, this lamp has an extended average lifespan of 2000hrs.

#### - Energy-Efficient

The flood light for bearded dragon is designed to operate with reduced power consumption compared to incandescent spot lamps, meaning you get the same level of performance for less energy usage.

#### - Fast Heating

The halogen basking lamp Infrared Lamp rapidly reaches optimal temperature, providing instant, focused heat for your reptile's basking area.

#### - Ideal for Supplemental

The halogen flood heat lamp works well as a supplemental lamp alongside self-ballasted mercury vapor lamps or fluorescent reptile lighting, contributing to a full-spectrum lighting and heating solution for your pets.

## Halogen Flood Lights for Reptiles

Aluminum Reflector Cup

Standard E27 Base

Soft Warm white

Compact Size

### Feature

- ✓ IR-A, UV-A
- ✓ Dimmable
- ✓ 100% CRI
- ✓ Soft warm white
- ✓ High lumen efficiency
- ✓ 2000 hours life span

### Application

Widely used for most reptiles, amphibians, mammals, and plants, including turtles, tortoises, geckos, lizards, frogs, toads, iguanas, snakes, chameleons, bearded dragons, hermit crabs, chickens, birds, puppies, and more.
